Your boutique website handbook

For Michele • Be YOU tiful Boutique by Michele

Keep this guide beside you when you manage products, orders and customers. Work through one task at a time, save, then check the customer-facing result. The setup page records what still needs approval; the remaining pages are your everyday reference after launch.

Your store

Shopify admin: https://admin.shopify.com/store/xapm2f-fr
Website: https://shopbeyoutifulboutique.com

Find the task you need

Page	Task
2	Setup status and rules to keep
3	Sign in and your daily routine
4	Add and edit products and variants
5	Stock, SKUs and shipping weights
6	Prices, clearance and the newsletter offer
7	Pack orders and handle pickup
8	Returns, refunds and customers
9	Rewards, Faire and website content
10	Troubleshooting, maintenance and help

The five habits that prevent most mistakes

☐ Check the store name and product variant before saving.

☐ Use one unique SKU per size/color combination. Do not reuse or casually rename mapped SKUs.

☐ Remove discounted products from the welcome-offer collection before marking them down.

☐ Do not deduct inventory a second time for a sale already recorded.

☐ If something looks wrong, record the order/SKU and contact Amber before trying repeated fixes.

Version 1 • Prepared 29 October 2026. Shopify labels can change. Use the admin search if a menu has moved. This handbook does not replace the boutique’s current published policies or a verified integration setup.

Setup status and rules to keep

Complete this page together before launch

As of 29 October: EPOS requests return 401, outbound processing is unfinished and the local integration safety work is not deployed. Love Loyalty's EPOS connection is unverified. The storefront must stay protected while these checks remain open. Do not use the old full-import or "Run sync now" action.

☐ EPOS access, approved product/location mappings and deployed worker tested.

☐ Physical opening stock reconciled and 71 estimated weights measured.

☐ Love Loyalty earning, redemption and refunds approved and tested for each supported channel.

☐ Welcome offer tested with regular-price, clearance, mixed carts and repeat use.

☐ Payment, delivery, pickup, taxes, accounts, notifications and policies checked.

☐ Pilot, restart/replay recovery and full trading day reconciliation passed.

Approved launch date _____ Approved by _____
Shopify stock location _____
EPOS stock location _____
Person maintaining welcome collection _____
Approved stock adjustment process _____

Rules for the store

Shopify owns the curated online catalog. Only individually approved products and variants go to EPOS. Do not import an old EPOS catalog into Shopify. An app being installed does not mean its connection is working.

Love Loyalty owns the rewards program. Do not reset balances or enter points in an unrelated app. Until the EPOS method is verified, do not promise that in-store purchases earn or redeem the same online rewards.

The newsletter offer is one-time 20% off regular-priced items, with a $100 minimum and one use per customer. Discount combinations are currently off. Its eligible-product collection needs manual maintenance.

Keep your policy reference current

At handoff, read Settings → Policies together and record the approved return window, conditions, clearance exclusions, shipping terms and pickup hours. Do not promise a delivery time, free-shipping threshold or refund method that the current policy does not offer.

Policy approval date _____ Approved return window _____
Pickup hours _____
Shipping and exception notes _____

Sign in and your daily routine

Sign in safely

1. Open the Shopify admin link on page 1 and sign in with your own account. Use two-step verification.

2. Check that you are in Be-YOU-tiful Boutique by Michele, store xapm2f-fr. Bookmark it.

3. Give staff their own permitted access through Shopify's user settings. Ask Amber if your plan limits staff access. Never share your owner password.

4. Keep recovery codes in your secure credential storage, not in this handbook. Sign out on shared devices.

At opening

☐ Open Orders and review new orders, payment status and holds. Paid and fulfilled are different statuses.

☐ Check pickup orders and outstanding customer questions.

☐ After sync is approved, check the verified integration status and unresolved errors. If you cannot find that view, ask Amber; do not assume silence means healthy.

☐ Spot-check yesterday's low-stock sellers against physical stock and the correct location.

☐ Look at the website on your phone for incorrect banners, unavailable featured products or broken links.

During the day

Record sales in the agreed sales system. Never manually subtract stock in both systems for the same sale. Before editing a variant, read its size, color and SKU. Keep stock changes and returns tied to the actual item and location.

At closing

☐ Finish eligible orders or leave a clear reason for a hold. Check uncollected pickups.

☐ Compare online and in-store activity with stock changes once sync is live. Report unexplained differences the same day.

☐ Check refunds and cancellations for the correct restock choice.

☐ Record unresolved issues for the next shift using order number, SKU, time and action taken. Avoid customer card details or full customer exports.

Know the words

Product: the style. Variant: a particular size/color. SKU: your unique internal item identifier. Barcode: a manufacturer or approved scan code. Location: the place holding inventory. Draft: not ready for sale. Fulfilled: the shipment or pickup workflow has been completed. Refund: money returned; it does not by itself tell you whether an item should go back into stock.

Add and edit products and variants

Create a product as a draft first

1. Go to Products and search the name, SKU and barcode first. If the product exists, edit it instead of making a second copy.

2. Choose Add product. Enter an accurate name and description, brand/vendor, category and the established product type. Keep status Draft while reviewing.

3. Add clear real photos. Check which photo belongs to each color. Write useful image descriptions where available.

4. Add options named Size and Color when needed. Each actual size/color combination becomes a variant. Do not create combinations you do not sell.

5. Open each variant and check its unique SKU, actual barcode if supplied, price, weight and inventory tracking. Do not invent manufacturer barcodes.

6. Assign the correct stock location and approved quantity. If the item needs EPOS mapping, send it to Amber for review before enabling sync.

7. Choose the intended collections and sales channels. Preview on phone and computer. Make Active and available on the Online Store only when approved for launch.

Edit an existing product

1. Go to Products, search by SKU or name and open the exact product.

2. Select the specific variant for size/color pricing, SKU, weight or quantity changes. Read the fields before saving.

3. Change only the intended fields, Save and reload to confirm. Check the customer-facing page and cart selection.

4. If changing a mapped SKU, deleting a variant or replacing the product, ask Amber first so the EPOS mapping is preserved.

Collections and photos

Products may belong to more than one collection. Category membership may use rules, so copy the established product-type spelling from a similar approved item. The tag “new” is used for New Arrivals in the theme setup; confirm the actual owner-store collection rule before relying on it. A tag does not change the selling price.

Avoid deleting a product just because it sold out. Keeping it allows history and possible restocking. Use Draft or Archive deliberately when retiring merchandise, and have Amber review its sync mapping first.

Before you save

☐ Correct style, size, color and unique SKU.

☐ Correct price and genuine comparison price, images and description.

☐ Measured weight with the right unit; tracking and location confirmed.

☐ Welcome-offer membership reviewed before any markdown.

Stock SKUs and shipping weights

Keep identifiers stable

80 variants received internal SKUs beginning BYB followed by their Shopify variant ID. These are boutique identifiers, not manufacturer or EPOS codes. Eight records with duplicated SKU values were given distinct suffixes. Do not remove those suffixes or copy an existing SKU onto a new size/color.

Check or correct stock

1. Open Products → Inventory or the product's variant. Filter/select the correct location.

2. Count the actual saleable units. Separate damaged goods, reserved orders and returns awaiting inspection.

3. Before adjusting, check whether a sale, return or pending sync event already accounts for the difference.

4. Use the approved adjustment process recorded on page 2. Record the reason, SKU, location, count and time. If sync is not yet verified, have Amber coordinate changes.

5. After approved processing, compare both systems again. Do not "fix" the same discrepancy repeatedly or edit both sides independently.

Replace an estimated shipping weight

1. Use the weight review CSV with Amber. Search products tagged weight-estimate-review, then identify the exact listed variant; not every variant on a tagged product is necessarily estimated.

2. Weigh the actual item on a scale. Record its weight and unit. Product weight and shipping package weight are separate.

3. Open Products → product → variant and update its shipping weight. Save and reread the field to catch ounces/pounds mistakes.

4. Mark that variant verified in the review list. Remove the product's review tag only after all its listed variants are checked.

5. Check Settings → Shipping and delivery for package weight and dimensions. Test a representative checkout/shipping quote.

When stock is wrong

Record the SKU, location, physical count, displayed quantities, time and related order or return. Contact Amber. Do not bulk import, overwrite all quantities, disable tracking or turn on overselling to make a discrepancy disappear. Amber must reconcile pending events before resuming a paused integration.

My regular stock check day _____
Person approving adjustments _____

Prices clearance and the welcome offer

Mark an item down safely

1. Before changing the price, go to Products → Collections and open “Welcome offer — regular-priced items.” Remove the product and save. Current eligibility is a manually maintained snapshot.

2. Open the product/variant. Set Price to the actual selling price. Set Compare-at price only to a genuine higher reference price.

3. Everyday markdowns are Clearance. Use the tag sale only for an approved sale event and remove it afterward. Tags do not apply a discount.

4. Check the storefront price, badge, cart and welcome-discount exclusion. For a product with some discounted variants, keep the whole product out of the welcome collection until Amber reviews it.

The newsletter offer

One-time 20% off qualifying regular-priced items • $100 minimum • email subscriber eligibility • one use per customer. Current discount combinations are off. Do not publish a different promise or change the threshold without agreeing it first.

Find the offer in Discounts and verify its Applies to collection, minimum, customer eligibility, one-use limit and combinations. The collection is for discount eligibility; it does not need a public menu link. Do not change the offer back to all products or the entire order.

When adding or restoring regular-price merchandise

Ask Amber to review and refresh the welcome collection. New products do not automatically become eligible. Restoring a price does not automatically restore eligibility. Do not add a product if any of its variants remains discounted or marked for a sale/clearance promotion under the agreed eligibility rules.

If a customer says the code failed

☐ Confirm the customer used the email address subscribed to the newsletter. Never subscribe someone without consent.

☐ Check whether the customer already redeemed the offer.

☐ Check qualifying merchandise and the $100 minimum; tax, shipping and ineligible lines must not be relied on to qualify.

☐ Check collection membership and any competing discount. Do not manually stack rewards and the welcome offer without an approved combination.

☐ If still unclear, send Amber the order/cart details without payment information.

Before launch, test a mixed cart and a repeated redemption. A saved discount setting alone does not prove that checkout behaves correctly.

Pack orders and handle pickup

Ship an online order

1. Open Orders and select the order. Check payment status, fraud/risk alerts and any hold before packing. Escalate an unpaid or flagged order instead of treating it as paid.

2. Read the delivery method, address, notes and selected variant. Pull the exact SKU, size and color from the correct location.

3. Inspect the item and pack it. Use the actual packed weight and package size for the shipping label. Confirm the carrier, service, charge and address before buying a label.

4. Use the order’s fulfillment action. If you use an outside carrier, enter the correct tracking number and carrier. Fulfill only the items actually shipping.

5. Send the appropriate shipment notification and verify the order status and tracking. Do not mark an entire order fulfilled when only part is shipped.

6. Hand the parcel to the carrier and keep the shipping record. Do not manually reduce stock again for the same order.

Prepare a pickup

1. Open the pickup order and verify payment and the pickup location.

2. Pull and inspect the exact items. Set them aside, labeled with the order number.

3. Use the pickup workflow to mark the order ready and send the ready notification only after everything is prepared.

4. At collection, check the order confirmation and follow your agreed identity procedure. Mark picked up when the customer actually receives it.

5. If an item is missing or pickup is delayed, contact the customer using the order’s contact details and follow the approved policy.

If an item cannot be supplied

Do not substitute a size, color or product without the customer’s agreement. Record the issue, contact the customer and follow the approved cancellation/refund procedure. Correct the underlying stock discrepancy with Amber so it does not repeat.

Test orders

Amber and Michele should agree how a test order will be paid, fulfilled and refunded before placing it. Payment test mode and live orders must be handled deliberately. Confirm test mode is off before public launch and review any fees or stock effects of the test.

Returns refunds and customers

Handle a return

1. Find the original order and review the current published return policy. Verify the item, timing, condition and proof of purchase. Do not invent an exception or promise a refund method not approved by Michele.

2. Inspect the returned item. Decide whether it is saleable, damaged or to be held. This is the restock decision, separate from the money decision.

3. Open the order’s return/refund workflow. Select the correct items and quantities. Check refund amount, shipping treatment and payment destination before confirming.

4. Restock only saleable items actually coming back, at the correct location. Leave restock off for damaged, missing or non-returned items.

5. Save the reason and send the appropriate customer notice. Check the order timeline and inventory effect once; do not make a second stock adjustment.

6. After the rewards integration is approved, verify the points/reward reversal follows the agreed rule. If it does not, ask Amber or Love Loyalty support before editing points.

Cancel an order

Review payment, fulfillment and shipment status first. A parcel already shipped may need a return instead. Confirm the cancellation/refund and restock choices before submitting. A cancelled order must not put merchandise back into saleable stock if it was already handed over or is missing.

Look up a customer safely

1. Go to Customers and search the existing email or phone before creating a new profile. Check the order history to confirm the right person.

2. If two profiles appear to match, ask Amber to review; do not merge just because names are similar.

3. Update contact details only when confirmed by the customer. Preserve email/SMS consent and opt-outs. A purchase is not newsletter consent.

4. Use the customer’s order history for service questions. Avoid exporting or emailing customer lists unless there is an approved business need and secure process.

Write useful notes

Use factual notes: order number, item, issue, agreed action and date. Do not record passwords, card numbers, sensitive personal information or unnecessary personal comments.

Rewards Faire and website content

Love Loyalty

Open Apps → Love Loyalty Rewards & Points. Use its actual settings for earning, redemption, expiry and returns. The EPOS connection is not verified as of this edition. Shopify POS support alone does not establish EPOS compatibility. Amber has asked support for the supported external-POS process.

Fill this in after reviewing the app together:
Points earned _____ Reward value/threshold _____
Expiry _____ Birthday/signup rule _____
Discounted items _____ Combination rules _____
Return/reversal process _____
Supported channels and verification date _____

Do not change earning rates, expiry, rewards or balances casually; these affect customer expectations. If points look wrong, gather the order, date and customer reference and contact Amber or support@loveloyalty.app. Do not award points twice while a delayed event is being investigated.

Faire

Check its import and inventory settings with Amber before enabling new automatic behavior. Search for existing products before importing. Do not let Faire and the custom EPOS connection independently overwrite the same stock. Record the agreed responsibility for product imports and receiving inventory.

Edit website content

1. For page text, find the page under Online Store → Pages, or use admin search. Some boutique text lives in theme sections instead of the page body.

2. For homepage sections, go to Online Store → Themes and open the theme editor. Confirm you are editing the intended theme. Preview phone and desktop layouts before saving; saving the live theme can change the public site immediately.

3. For menus, find Menus through admin search. Check the destination before changing a link.

4. For Shop the Look, ask Amber to show the existing Content → Metaobjects entries for type look. Use approved real products and verify the resulting Look page link; do not use obsolete test products.

5. After saving, open the actual page, click the product/menu links and check mobile. Do not edit theme code, publish a replacement theme or uninstall an app to solve a content issue.

Keep a short change record: date, page/product, what changed and who approved it. Ask Amber before changing domain/DNS, checkout, app permissions or a connected integration.

Troubleshooting maintenance and help

Problem	First action
Product missing online	Check Draft/Active status, Online Store availability, collection rules and the selected variant. Preview before changing anything.
Unexpected sold-out status	Check the variant, location, tracked stock and order reservations. Count physical stock; do not enable overselling.
Welcome offer includes clearance	Remove the product from the eligibility collection immediately; ask Amber to review checkout.
Stock or rewards disagree	Record SKU/order, time and location. Contact Amber; do not retry adjustments repeatedly.
EPOS shows 401 or sync fails	Ask Amber/EPOS support to verify account API access. Do not paste keys into email or reset everything.
Website or checkout unavailable	Capture the URL, time and error without customer/payment details. Contact Amber; preserve the current configuration.

Weekly and monthly care

Weekly: review low stock, unresolved orders/returns, welcome collection membership, sale/new tags and featured Look products. Check recent stock discrepancies and integration failures with Amber.
Monthly: review staff access, app subscriptions, shipping rates/packages, store hours, policies and a phone checkout walkthrough. Compare sales and refunds with payouts; reports alone are not bank reconciliation.

How to ask for help

Email Amber at ambermingione@gmail.com with the store name, exact problem, time, SKU/order number, expected result and what happened. Include a cropped screenshot if useful. Never include passwords, API keys, payment card information or a full customer export. Shopify help: help.shopify.com. Love Loyalty: support@loveloyalty.app.
