Website connection and launch meeting

Facilitator guide for Amber • Working session with Michele

Use this meeting to approve the catalog, confirm store settings, resolve connection access and run a small controlled pilot when the integration is ready. Leave with clear owners and next steps. Public launch depends on recorded test results, not on finishing this agenda.

Meeting date _____ Attendees _____

Open with this

“Today we will walk through your products and store settings, agree how sales and returns should work, and test the connection if access and processing are ready. We will keep the storefront protected until stock, checkout and rewards work reliably.”

Starting position as of 29 October 2026

☐ Catalog repair is live: 80 internal SKUs added and 8 duplicate-SKU variant records corrected. No products were deleted.

☐ 71 shipping weights are estimates and still need weighing. The audit found no blank SKUs, duplicate SKUs or missing weights among 266 draft variants after repair. This is not a physical stock count.

☐ Newsletter discount now targets the regular-price eligibility collection, with 20% off, a $100 minimum and one use per subscriber. Collection maintenance is manual; checkout tests remain open.

☐ EPOS V4 requests return 401 Unauthorized despite matching credential copies. Outbound inventory, order and customer processing remains unimplemented. Local safety changes are not deployed.

☐ Love Loyalty is installed, but EPOS earning and redemption are not verified. Support was emailed from ambermingione@gmail.com; a supported integration contract is still needed.

Suggested 90 minute agenda

Time	Focus
0–10 min	Goals, access and current blockers
10–30 min	Catalog, variants, locations and physical stock
30–45 min	Welcome offer, rewards, Faire and policies
45–65 min	Checkout and operational settings
65–80 min	Pilot only if prerequisites pass; otherwise owner training
80–90 min	Record decisions, assign owners and agree launch gate

Prepare before Michele arrives

Have these ready

☐ Michele's own Shopify login with two-step verification and access to the correct EPOS Back Office account or EPOS support. Do not share passwords or put credentials in notes.

☐ Shopify owner store: admin.shopify.com/store/xapm2f-fr. Confirm the store name before every change. Do not use Amber's test store.

☐ A scale, four representative products and their labels: multi-size, color variant, clearance and low-stock. Use actual SKUs; do not invent pilot products in the live catalog.

☐ The catalog CSV, the estimated-weight issues CSV and this guide. Ask Michele to bring a physical count for the pilot items.

☐ Owner handbook for hands-on training. A phone and a computer for checkout review.

☐ Amber confirms the production app version, durable database, worker readiness, rollback plan and location mappings before any live sync test. No full-catalog import.

Integration status: beau-bou-app/docs/EPOSNOW_SYNC.md

Confirm the operating decisions

☐ Shopify is the curated product catalog. Retired EPOS items stay out unless individually approved.

☐ Every size/color variant maps to one verified EPOS product using stored IDs and unique SKU/barcode evidence. No title-only matching.

☐ Name the Shopify location and EPOS location explicitly. Record both IDs before setting stock.

☐ Love Loyalty remains the rewards system. No points reset, duplicate rewards engine or unsupported points edits.

☐ Agree who may edit prices, stock, promotions, shipping and policies. Confirm staff access individually.

Shopify location and ID _____
EPOS account and location ID _____
Catalog approver _____ Stock approver _____

If EPOS still returns 401

Stop connection tests. Michele or EPOS support must verify API device access, subscription and account scope through the secure setup. A matching key is not a successful authentication test. Continue catalog review, weighing, policies and training. Do not run "Run sync now," bulk imports or manual stock mirroring as a workaround.

Lead the decisions and demonstrations

Catalog and stock review

1. Open each pilot product. Have Michele identify the real garment, size and color. Confirm price, compare-at price, photos and whether it should launch.

2. Read the SKU/barcode from both systems. Hold missing or ambiguous matches for review. Keep internal BYB SKUs unless Amber approves a mapped replacement.

3. Weigh every estimated variant in the review CSV; save the measured value and unit. Package weight is separate.

4. Count saleable stock at the agreed location. Record damaged, reserved or returned items separately. Compare physical count with both systems before choosing opening quantities.

5. Confirm Faire cannot create a duplicate catalog or compete with the chosen stock process. Record its actual import and inventory settings.

Welcome offer and rewards

Confirm: one-time 20% newsletter offer, regular-priced items only, $100 minimum, subscriber eligibility and one use per customer. Current combination settings are off. Demonstrate removing a product from “Welcome offer — regular-priced items” before markdown. New eligible products need an approved collection refresh.

In Love Loyalty, record the actual earning rate, reward thresholds, expiry, signup/birthday rules, discounted-item treatment, refunds and combinations. Do not invent these from older custom-rewards documents. Check the support response for an explicitly supported EPOS method. If unavailable, record a launch blocker and ask Michele for a deliberate business decision; do not quietly promise cross-channel rewards.

Store settings and policies

☐ Owner confirms payment provider readiness, payout destination and how test orders will be handled.

☐ Review shipping zones, rates, package sizes/weights and pickup location. Try representative delivery addresses.

☐ Owner or her tax adviser confirms required tax registrations and setup. Do not infer tax correctness from a successful checkout.

☐ Check sender/reply address, customer confirmations and pickup notifications. Confirm customer account sign-in.

☐ Read the current published return and shipping policies with Michele. Resolve any conflict before training staff or accepting orders. Confirm address, hours and contact details.

☐ Preview navigation, collections, search, product variants, Look links, cart and checkout on mobile and desktop.

Approved changes and decisions _____
_____
_____

Run and record the controlled pilot

Do this only after working API access, deployed processing, approved mappings and a running durable worker are confirmed. Use one change at a time first. Record before/after stock in both systems, location, event/order ID, time and outcome. Amber observes the queue and logs without copying customer payloads.

Test	Evidence required	Result
Product update	Correct mapped variant; no duplicate, retired import or overwritten Shopify content.	____
In-store sale	Shopify decreases once at the mapped location.	____
Online sale	EPOS records the intended transaction; stock decreases once.	____
Return and cancellation	Restock only when instructed and at the correct location; refund alone is not a stock decision.	____
Concurrent sales	Both sales retained; no lost updates or duplicate deductions.	____
Replay and outage	Duplicate delivery has no extra effect; queued work survives restart and failures remain visible. Amber runs this safely.	____
Customers	Existing customer matched; ambiguous email/phone held for review; consent preserved.	____
Rewards	Supported earn, redeem and refund paths each work once across both channels.	____
Checkout	Right variant, delivery/pickup, tax, totals and confirmations on phone and computer.	____

Welcome offer checkout cases

☐ Eligible subscriber: $100 of qualifying regular-price merchandise receives $20 off those lines, before tax/shipping effects.

☐ Below qualifying minimum: offer does not apply. Clearance-only cart receives no welcome discount.

☐ Mixed cart: clearance remains full clearance price; eligible lines alone meet the qualifying minimum. Check the actual threshold behavior.

☐ Repeat use by the same customer is refused. Review combinations with a loyalty reward without changing settings blindly.

Pilot SKU(s) _____ Test order(s) _____
Opening Shopify / EPOS / physical count _____
Closing Shopify / EPOS / physical count _____
Failure and next action _____

Close with a clear decision

Launch gate

☐ Approved launch catalog and measured shipping weights; accurate physical opening counts and explicit mappings.

☐ Verified two-way product/inventory/order/customer processing with recovery tests. No unexplained pilot discrepancies.

☐ Approved and tested rewards behavior, or a separately documented owner decision about any unsupported channel.

☐ Welcome offer mixed-cart and repeat-use tests pass; a named person maintains its eligibility collection.

☐ Payments, shipping, pickup, taxes, policies, accounts and notifications verified.

☐ A full trading day of online and in-store activity reconciles without unexplained differences.

☐ Michele can demonstrate a product edit, an order, a return and escalation. Amber confirms the exact deployed release.

Decision: ☐ Continue preparation ☐ Pilot only ☐ Ready for final launch approval
Keep the storefront password until all required checks pass and Michele approves launch.

Assign work before ending

Action or blocker	Owner	Due	Evidence to close
EPOS API access and deployed processing	_____	_____	_____
Measured weights and opening counts	_____	_____	_____
Love Loyalty supported EPOS method	_____	_____	_____
Checkout and discount tests	_____	_____	_____
Other _____	_____	_____	_____

Explain recovery

If stock or transactions disagree, stop further outbound sync using the verified production pause control when available. If that control is not deployed, Amber must stop the integration at its actual runtime. Retain queued events and record the incident. Reconcile event history and physical stock before resuming; never restore an old stock snapshot blindly.

End with this

“Here is what passed, what is still open, who owns each next step and what must happen before the password comes off. Your handbook covers daily work. We will update its setup page when the connection and launch tests are complete.”

Next review _____ Michele _____
Amber _____ Launch approval date _____

Evidence basis: current boutique handoff and EPOS guide dated 29 October 2026; catalog exports from the same date. Earlier September packets are historical and must not override the current Shopify-owned catalog and Love Loyalty decisions.
